SUMMARY

I&IT Developer/Analyst with 1+ year of hands-on experience delivering cloud-based solutions on AWS in a government production environment. Proven experience leading Amazon Connect migrations, using CI/CD pipelines, automating infrastructure tasks, and shipping user-facing products adopted by 5,000+ users. Strong foundation in full-stack development, DevOps workflows, and production support.

EDUCATION

Wilfrid Laurier University

Honours Bachelor of Science in Computer Science

Waterloo, ON

Sep 2021 - April 2026

TECHNICAL SKILLS

Cloud & Platforms:	AWS (Amazon Connect, DynamoDB, Lambda, IAM, CloudWatch, CodePipeline)
Languages:	Python, JavaScript, TypeScript, SQL, Java, C#, HTML, CSS, PHP, JSON, VBA
Frameworks and Libraries:	React.js, MySQL, Node.js
Developer Tools:	Azure DevOps, Git, Linux, Bash, Postman, CI/CD, Visual Studio, Excel

WORK EXPERIENCE

I&IT Developer/Analyst

Ontario Public Service / Ministry of Public and Business Service Delivery

Toronto, ON

Sep 2024 - Dec 2025

- Led the development of the Tribunals Ontario Contact Center cloud migration to **Amazon Web Services** and **Amazon Connect**, utilizing **CI/CD pipelines** and collaborating with cross-functional teams to meet project milestones.
- Built a configurable **Python** automation script (**Boto3**) to tag hundreds of Amazon Connect resources, reducing manual configuration time by 90%.
- Led development and maintenance of an open-source tab cycling/scheduling **Chrome extension**, incorporating client feedback and issue reports during agile iterations.
- Provisioned and configured 300+ users in **Amazon Connect**, ensuring a smooth transition from UAT to PROD environments and delivering ongoing support.
- Diagnosed and resolved defects in **DynamoDB** and **Amazon Connect**, executing UAT test scenarios and tracking progress using **Azure DevOps** and **Jira**.
- Deployed call center solutions to UAT for two OPS tenants using **AWS CodePipeline**, **Git**, and **Change Requests (CRQs)**, followed by validation and sanity testing.
- Developed and integrated defect fixes in **JavaScript**, **Python**, and **TypeScript**, creating pull requests to merge code into the production branch.
- Resolved accessibility issues in a video chat appointment scheduler to meet **AODA** compliance using **React** and **Node.js**.

PROJECTS

AI-Driven Dynamic Parking Optimization System

Python, Pytorch, Jupyter Notebook, Matplotlib

github.com/RhythmicDigital/CP468-A1

- Designed and implemented a modular intelligent parking-assignment system using A* Search, Q-Learning, and Deep Q-Networks (DQN) to optimize routing and parking selection under stochastic traffic conditions.
- Modeled the environment as a Markov Decision Process (MDP) with dynamic rewards, constrained actions, and stateful multi-step decision making.
- Built a custom DQN training pipeline in PyTorch featuring: experience replay, target networks, epsilon-greedy exploration, action masking, and stochastic environment simulation.

TabCycle – Productivity Chrome Extension

JavaScript, HTML, CSS, Chrome Extensions API

tabcycle.com

- Created a browser extension used by a provincial government agency to support operational wallboard displays, collaborating with stakeholders to refine requirements and deliver iterative improvements.
- Designed and implemented a robust scheduling system using the **chrome.alarms** API to open and close tabs at user-defined times and recurrence patterns.
- Designed with future enterprise use in mind; project is open-source and publicly available on GitHub.
- Performed quality assurance by testing for defects and frequently releasing updates with fixes.
